

# CONSENTLENS

## App Permission Reality Checker

Know what every installed app is collecting about you — no login, no device access, zero personal data processed.

### TEAM

3 Musketeers

Satyam Gupta  
Chiranjivi Panda

### BUILT WITH

ArmorIQ · ArmorClaw · Open-  
Source AI · React

ArmorIQ-enforced policy · Only app names processed · Zero personal data retained on every request

# The Permission Blindspot

12+

permissions per  
average app

85%

users accept all  
without reviewing

< 3s

average decision time  
on permission dialogs  
**EXISTING SOLUTIONS FAIL**

iOS Settings is buried 4 menus deep.  
Exodus Privacy needs APK upload. Manual  
research takes 30+ minutes. No tool is fast,  
simple, and privacy-preserving.

## The privacy gap is massive

ConsentLens turns vague app permissions into simple, risk-based explanations.

\*Approximate UX privacy-literacy research data — ConsentLens closes this gap

# ConsentLens: Instant Clarity, Zero Compromise

## Why ConsentLens Outperforms Every Existing Tool

| Aspect   | Existing Solutions                | ConsentLens ✓                     |
|----------|-----------------------------------|-----------------------------------|
| Privacy  | ✗ Requires login or device access | ✓ App names only — nothing else   |
| Speed    | ✗ 15–30 min research per app      | ✓ 30 seconds, fully automated     |
| Language | ✗ Technical jargon and legal text | ✓ Plain English for any user      |
| Security | ✗ No audit trail or enforcement   | ✓ ArmorIQ-enforced, fully audited |

**ArmorIQ Guarantee: Only app-name strings processed • No credentials • No device access • Immutable audit log on every request**

# Architecture & Tech Stack

Permission sensitivity weights used by the scoring engine

More sensitive permissions contribute more to the final privacy footprint score.

Scoring weights that power the risk engine

## TECH STACK

# 5 Features That Set ConsentLens Apart

## FEATURE

## WHAT IT DOES

0  
1

CORE INNOVATION

### Zero-PII Architecture

Only app names enter the system. ArmorIQ enforces a strict metadata-only policy at every request. PII is blocked and logged before reaching any service. The privacy promise is technical — not a marketing claim.

0  
2

AI-POWERED

### Plain-Language AI Analysis

An open-source AI engine converts technical permission strings into sentences anyone understands. Instead of 'READ\_CONTACTS access granted', users see: 'This app uploads your full contact list to external servers.'

0  
3

SMART SCORING

### Weighted Risk Score (0–100)

15 permission types scored by sensitivity, data-sharing practices, and ecosystem risk. Precise location carries 8 pts; camera and microphone 6 pts each. Clear LOW / MEDIUM / HIGH / CRITICAL verdict with justification.

0  
4

USER-CENTRIC

### Actionable Remediation Steps

Not just 'Instagram is risky.' Exact Settings navigation paths to revoke excessive permissions on Android and iOS — specific, doable, today. No technical knowledge required.

0  
5

MULTI-APP

### Batch Analysis (Up to 5 Apps)

Analyze multiple apps in one request. Results return as comparable risk cards — letting users instantly identify which of their installed apps is the most invasive.

# Real-World Impact & Feasibility

**6.8B**

Global smartphone users  
— all potentially exposed

**< \$0.05**

Cost per full analysis  
(cloud-scalable, free tier)

**30 sec**

Input to complete  
permission risk report

## Higher permission breadth usually means higher privacy risk

Bar ranking makes the comparison faster than a scatter for judges.

Illustrative risk ranking generated by ConsentLens scoring engine

## WHO BENEFITS

**70%**

General public

**15%**

Parents

**10%**

Corporate IT

**5%**

Researchers

## FEASIBILITY

- ✓ Stateless — no database, zero setup
- ✓ DPDP Act 2023 (India) compliant
- ✓ Serverless — auto-scales to 1M+ queries
- ✓ ~\$200/mo estimated for 10K queries/day

# Live Demo & Some Important Stuff

## ConsentLens · Sample Output

|           |          |        |
|-----------|----------|--------|
| TikTok    | CRITICAL | 89/100 |
| Facebook  | CRITICAL | 87/100 |
| Instagram | HIGH     | 74/100 |
| Uber      | MEDIUM   | 52/100 |
| Signal    | LOW      | 12/100 |

 Secured by ArmorIQ · Audit ID: ARM-2026-XXXX · Zero data retained

## 01

### Universal, Urgent Problem

6.8B smartphone users affected. India's **DPDP Act 2023** makes this legally timely today.

## 02

### Meaningful Security Integration

AarmorIQ policy enforcement is the product — not an add-on. The privacy promise is provable, live, and audited.

## 03

### Built and Working

Stateless design, live AI analysis, real AarmorIQ audit log. A working product, not a mockup.

**“The best security tool is one that doesn’t compromise your privacy to protect it.”**
